

Energy Efficiency Tips for Six More Weeks of Winter

- 1) Turn the thermostat down at night to save up to 10 percent in usage.
- 2) Setting ceiling fans to spin clockwise helps trap heat in the room.
- 3) Heat the rooms you use and close the vents elsewhere.
- 4) Use exhaust fans sparingly, as they result in heat loss.
- 5) Get a humidifier, as moist air feels warmer.
- 6) Check your furnace filter monthly and clean it when needed.
